Business Field

- MUNDUS's mission is to create and expand new business, and we have much concern on medical care, IT and environmental measure related project, because our president has owned and managed (for grouped companies) more than 10 manufacturing plants in Japan, which (such plants) have been required for reduction of CO2 emissions, in particular, for utilization of renewable energy. In this context, we have collaborated with KANKYO CLEANTECH LLP, India, in the said field, and also we have a good partnership with excellent academic partners who are suitable for performing a collaborative research project.
